

In 1949, Vanton Pump & Equipment Corp was founded...

and invented the industry's first thermoplastic pump.

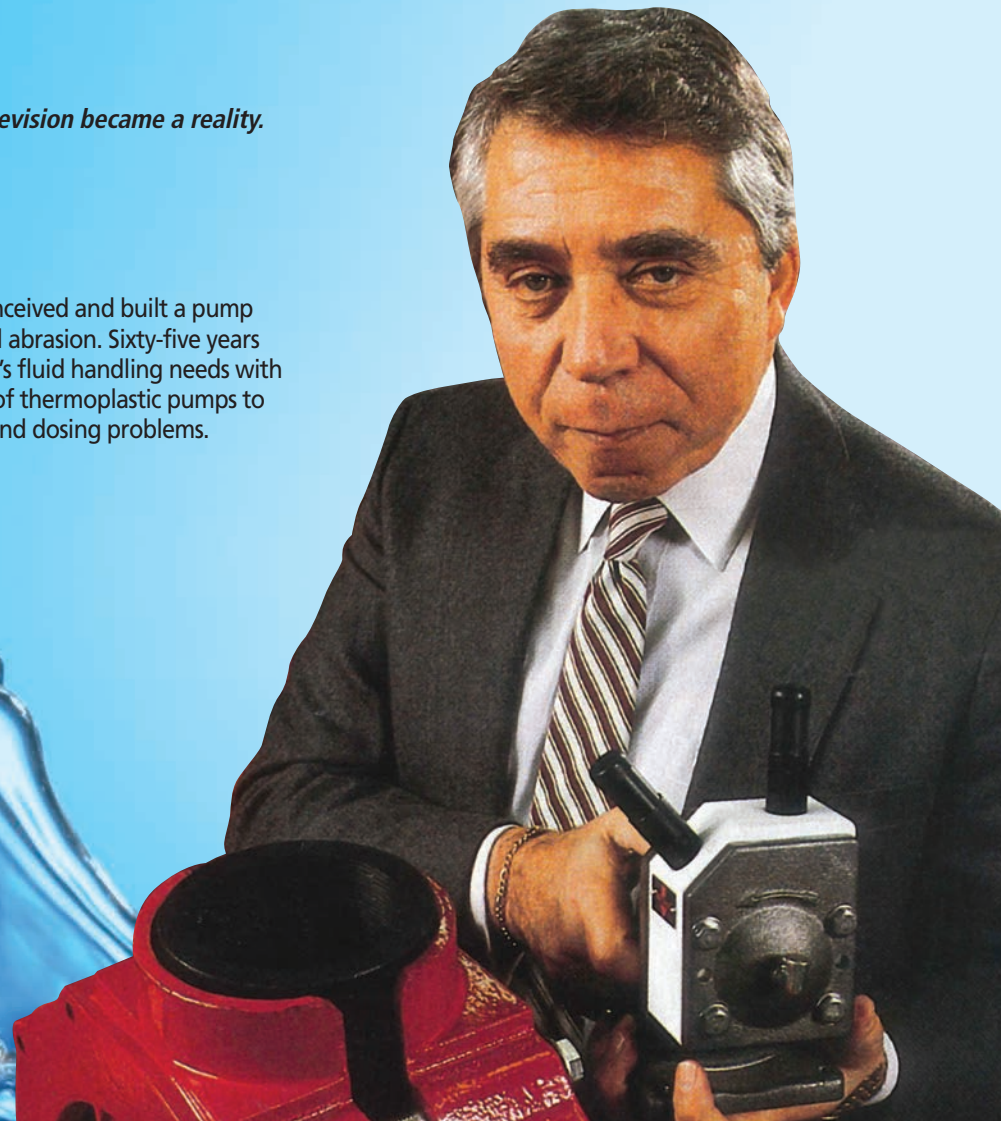

Incidentally, that same year the NBA was born

and Color Television became a reality.

Quite a year all around!

Gerry Lewis, Vanton's founder, conceived and built a pump that ruggedly resists corrosion and abrasion. Sixty-five years later we're still meeting the world's fluid handling needs with the industry's most extensive line of thermoplastic pumps to solve transfer, fluid containment and dosing problems.

The reasons for Vanton's longevity are simple

- Every Vanton Pump is individually engineered and constructed to perform flawlessly to handle your specific requirements.
- Before leaving our facility, every pump is thoroughly tested to verify that it will perform as specified.
- We address every customer query and concern quickly and responsibly to ensure customer satisfaction.

Whether you need a sealless, self-priming Flex-I-Liner rotary pump, a horizontal Chem-Gard centrifugal pump, a Sump-Gard vertical centrifugal pump, or one of our integrated pump/tank engineered systems... you can be sure if it has the Vanton name on it, it has 65 years of problem solving innovation built in. Just one more Vanton AdVantage.
